Glass Lap Sealed Insulated
Fiberglass Corrugated

- End Wall Poly/Film Double Single
Polycarbonate/Acrylic Corrugated Double Triple Wall
Glass Lap Sealed Insulated
Fiberglass Corrugated

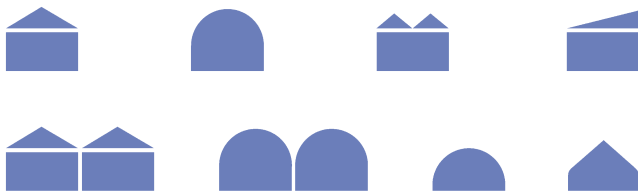

- Side Wall Poly/Film Double Single
Polycarbonate/Acrylic Corrugated Double Triple Wall
Glass Lap Sealed Insulated
Fiberglass Corrugated

Greenhouse Altitude

Height above sea level

Note: This is important if your greenhouse is located 2000' or more above sea level.

Please circle greenhouse shape:

Please describe special heating system requirements:

Heating System Design

TrueLeaf Heating Systems can be designed as the primary source of heat for your greenhouse or a supplemental-only heating system.

- Specifications Primary Supplemental

Design For Outside °F Low Temperature
Inside °F Temperature Required
Soil Temperature °F for Soil/Floor Heating Systems

Type of heat desired

- Perimeter On-Bench
On-Ground Under-Bench
In-Floor Slab Forced Air
Gutter Snow-Melt

Heating Source

- Include New Boiler Modular/Low Mass High Mass
Natural Gas LP Fuel Oil Electric
Use Existing Boiler Make/Model

Curtains

Do you intend to install heat retention curtain? Yes No

Heating System Controls

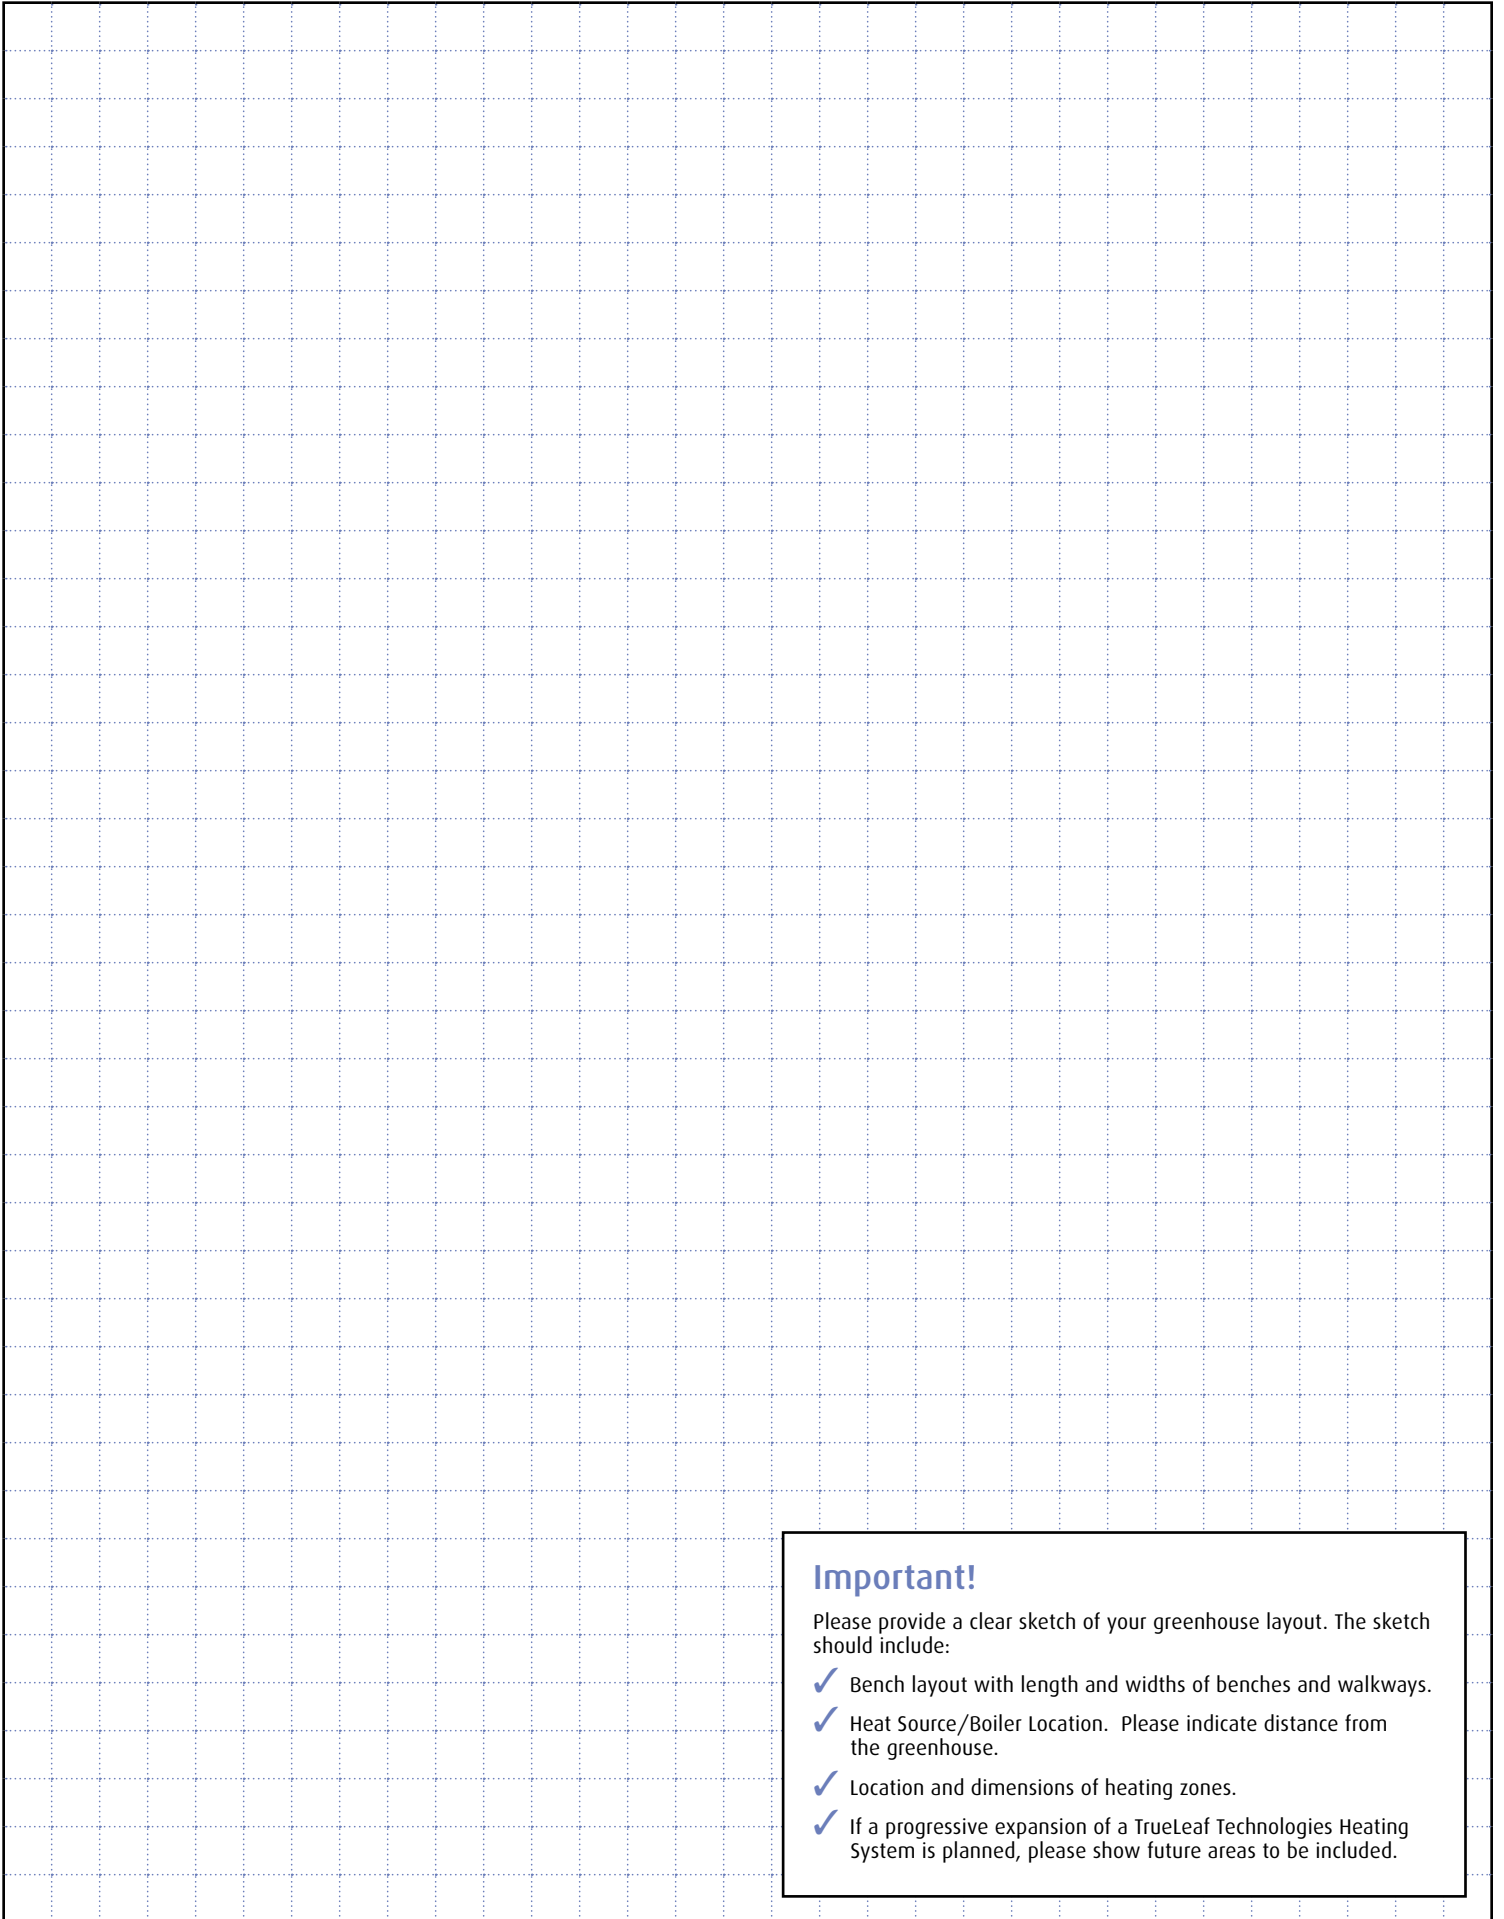

Shall we include? Yes No

Heating System Installation

TrueLeaf maintains a network of experienced, independent greenhouse heating system installation contractors. We can arrange for our qualified installation contractors to install a TrueLeaf Heating System for you.

- Please provide quote for installation

Greenhouse Layout (Please indicate North)

Important!

Please provide a clear sketch of your greenhouse layout. The sketch should include:

- ✓ Bench layout with length and widths of benches and walkways.
- ✓ Heat Source/Boiler Location. Please indicate distance from the greenhouse.
- ✓ Location and dimensions of heating zones.
- ✓ If a progressive expansion of a TrueLeaf Technologies Heating System is planned, please show future areas to be included.
